Indian Standard

SPECIFICATION FOR GLAZED FIRE-CLAY SANITARY APPLIANCES

PART VI SPECIFIC REQUIREMENTS OF BED PAN SINKS

(Second Revision)

0. FOREWORD

- 0.1 This Indian Standard (Part VI) (Second Revision) was adopted by the Indian Standards Institution on 4 May 1979, after the draft finalized by the Sanitary Appliances and Water Fittings Sectional Committee had been approved by the Civil Engineering Division Council.
- 0.2 This standard was first issued in 1958 and was revised in 1963 to cover requirements for additional glazed earthenware sanitary appliances, such as orissa pan, laboratory sink, squatting plate, slab and stall urinal and half-round channel. In this revision the scope of the standard has been restricted to cover requirements for glazed fire-clay sanitary appliances only, since the glazed earthenware sanitary appliances were outdated as well as unhygienic. The Sectional Committee has found that only some of the sanitary appliances were being made in the glazed fire-clay and, therefore, decided to cover the requirements for these appliances only in this revision. The general requirements applicable to all appliances and specific requirements for different types of appliances have been covered in separate parts of the standard. This standard (Part VI) lays down the specific requirements of bed pan sinks.
- 0.3 For the purpose of deciding whether a particular requirement of this standard is complied with, the final value, observed or calculated, expressing the result of a test or analysis, shall be rounded off in accordance with IS:2-1960*. The number of significant places retained in the rounded off value should be the same as that of the specified value in this standard.

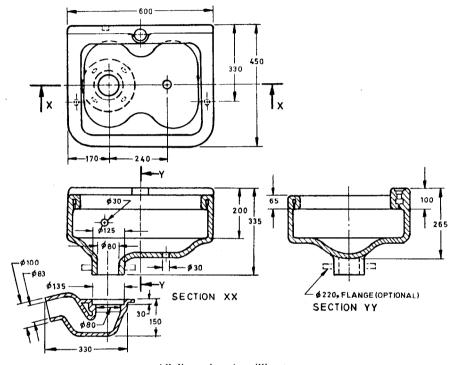

1. SCOPE

1.1 This standard (Part VI) lays down the pattern and size, construction, dimensions and tolerances of bed pan sinks made of fire-clay.

^{*}Rules for rounding off numerical values (revised).

2. REQUIREMENTS

- 2.1 General—The general requirements of material, manufacture, methods of test, sampling and inspection shall conform to IS: 771 (Part I)-1979*.
- **2.2 Pattern and Size** Bed pan sink shall have a size of 600×450 mm (see Fig. 1).

All dimensions in millimetres.

Fig. 1 BED PAN SINK

2.3 Construction

- 2.3.1 The bed pan sink shall be of two piece construction consisting of bed pan sink and outlet trap.
- 2.3.2 The pan shall be provided with a flushing rim having adequate holes for flushing the whole of the interior surface of the bowl. It shall have a water inlet socket in the middle of the top face of the rim and a water inlet hole in the top side wall of the pan for connection to water sprayer.

^{*}Specification for glazed fire-clay sanitary appliances: Part I General requirements (second revision).

- 2.3.3 The inside surface of the pan shall be uniform and smooth and shall have a circular waste hole at one end of the bed pan into which the interior of the pan shall drain. The waste outlet shall be provided with a flange with four holes for connection to the trap. The pan shall also have a second waste outlet of 30 mm diameter and shall be suitably connected to a waste pipe for further drainage of the pan.
- 2.3.4 Two stud slots shall be provided on the underside of the pan conforming to the requirements given in Fig. 1.

2.4 Dimensions and Tolerances

- 2.4.1 Dimensions Bed pan sink shall have dimensions conforming to Fig. 1.
- 2.4.2 Tolerances The following tolerances shall be permissible on the dimensions given in Fig. 1:

a) On dimensions less than 50 mm \pm 2 mm

b) On dimensions of 50 mm and over \pm 4 percent

3. MARKING

- 3.1 Bed pan sinks shall be clearly and indelibly marked at a prominent place, visible after the pans are installed, with the name or trade-mark of the manufacturer.
- 3.1.1 Each bed pan sink conforming to the requirements specified in this standard may also be marked with the ISI Certification Mark.

Note — The use of the ISI Certification Mark is governed by the provisions of the Indian Standards Institution (Certification Marks) Act and the Rules and Regulations made thereunder. The ISI Mark on products covered by an Indian Standard conveys the assurance that they have been produced to comply with the requirements of that standard under a well-defined system of inspection, testing and quality control which is devised and supervised by ISI and operated by the producer. ISI marked products are also continuously checked by ISI for conformity to that standard as a further safeguard. Details of conditions under which a licence for the use of the ISI Certification Mark may be granted to manufacturers or processors, may be obtained from the Indian Standards Institution.
